DRC Technologies Launches Phase One of Enhanced Website

Austin, Texas, December 4, 2008 – DRC Technologies, Inc. (DRC) today launched the first phase of its newly enhanced website. The site offers expanded information on the company, its engineering services and its broad mix of solids reduction products. The website redesign is the first step in the companies new customer information strategy. Additional enhancements are schedule in the near future to broaden the customer experience and expand the depth of information that will ultimately be available.

“This new website will give us a better opportunity to showcase our products and service and provide new and existing customers with exciting advancements at DRC,” said Fred Erickson, President. “We expect that this will broaden our corporate presence both in the U.S. and internationally and augment our ability to be responsive to inquiries.”

For additional information on DRC’s engineering services and solids reduction products, contact Fred Erickson at (512) 346-6106 or visit www.drctechinc.com.

DRC Technologies, Inc. is an Austin-based corporation providing both U.S. and international customers with complete design and implementation solutions to improve business processes and optimize business operations for increased profitability and growth.
